### A NOTE TO USERS

#### *Modifications in this issue:*

Commencing with this issue, Table 62 "Petroleum and Gas" has been re-designed to show the supply and disposition of crude oil and natural gas.

The domestic production of crude oil and equivalent shown in the table includes crude oil, condensate and pentanes plus produced in the fields, at the well head or from natural gas processing plants.

Disposition is given to the first stage of marketing, either directly as deliveries to refineries or export.

The combined figures of deliveries to refineries and exports will not necessarily add to total new

supply (domestic production + imports) due to losses, inventory changes and other uses.

All volumes of crude oil are given in million barrels of 35 Canadian gallons at 60° F.

Net new production of natural gas includes gross new production exclusive of field flared and waste gas.

Marketable gas is taken to include all natural gas purchased directly from fields or processing plants which meets the specifications required for domestic, commercial or industrial fuel use.

All volumes of natural gas are given in million cubic feet measured at 14.73 pounds per square inch at 60° F.

## NATIONAL ACCOUNTS, INCOME AND EXPENDITURE THIRD QUARTER 1965

### Introductory Review

Gross National Product rose to a seasonally adjusted annual rate of \$52.1 billion in the third quarter of 1965, 2.3 per cent higher than in the preceding period. With prices up about half of one per cent, the greater part of the advance in Gross National Product represents a gain in real terms. The latest estimate of the value of production brings it 44 per cent above its cyclical low early in 1961. When the rise in prices is taken into account, the advance in volume is seen to be almost 32 per cent.

The expansion was again broadly based, with all the components of final demand contributing to the advance in the total. The demand for stock building did not add to the sharply increased value of production as the rate of accumulation was little changed from that of the previous period. Supported by another substantial rise in income, the strongest expansionary influence came from the personal sector, where the increased demand for durable goods was notable. The increment to personal spending in the third quarter of \$776 million was the second largest recorded in the course of the current expansion and not far short of the \$832 million increment of the preceding period. A further substantial addition to demand, \$524 million, came from higher outlays for plant and equipment as businessmen sharply expanded their productive capacity. There was, however, only a small gain in the value of housing put in place. Exports of goods and services continued to advance appreciably. The good third quarter performance reflects among other things initial shipments of wheat under the new contracts entered into with the U.S.S.R. early in August. As is usual in periods of high and rising demand, including heavy investment in plant and equipment, imports of goods and services rose. The deficit on current international account showed little change, moving from an annual rate of \$1,040 million in the second quarter to \$1,092 million in the third, after allowances for seasonal factors. Government expenditure on goods and services which directly affects Gross National Product rose moderately; however, transfer payments were considerably higher and as revenues from direct taxes were little more than maintained, partly as a result of a cut in personal tax rates, the combined government surplus was reduced.

The salient developments on the income side were another large increase in labour income and a moderate gain in corporate profits, following little change in the preceding period. Farm income rose sharply, partly as a result of higher profits by the Canadian Wheat Board due to renewed heavy exports of wheat.

Gross National Product in the first three quarters of 1965 was somewhat more than 9 per cent higher than in the same period of 1964. With the data

now available it is possible to suggest orders of magnitude for the year 1965 as a whole. If, for instance, it is assumed that there is no change other than seasonal in the fourth quarter, Gross National Product for 1965 will show a gain from 1964 of about 9 per cent; assuming a  $1\frac{1}{2}$  per cent increase in the fourth quarter, the gain will be close to  $9\frac{1}{2}$  per cent.

The forces of expansion have continued to be the dominating feature of the first nine months of 1965. So far this year the profile of the economy can be distinguished by the buoyant demand for business plant and equipment which is running 20 per cent above the first nine months of last year; by the high and rising levels of consumer spending; by increased government outlays on goods and services particularly at the provincial-municipal level; and by the rising demand for foreign goods and services. However, some areas of final demand showed only moderate gains. In the field of residential construction the quarter to quarter movements have been small and to some extent offsetting, although the year as a whole so far, is running well above the comparable period last year due to a sharp rise in housing outlays at the end of 1964. Gains in exports thus far have been moderate owing to the previous high levels from which these gains must be achieved, with the result that the adverse balance on current international transactions has shown a considerable deterioration from the same period of 1964.

The vigour of the expansion has given rise to substantially higher levels of personal income, resulting partly from the rapidly increasing employment opportunities. The total number of employed rose by 3 per cent from September 1964 to the same month of this year and the unemployment rate of 3.6 per cent seasonally adjusted in September was the lowest experienced since 1956.

The impact of the increased demand on production has been noted particularly in the output of motor vehicles and parts, most iron and steel product industries, electric power and gas utilities and the construction industry.

The implicit price index of Gross National Expenditure in the first three quarters of this year stood just under 3 per cent above the same period last year, while the consumer price index was more than  $2\frac{1}{2}$  per cent higher in September than a year ago. While this movement was in part a reflection of special factors including the removal of the final 3 per cent of the exemption from sales taxes of production machinery and building materials and the sharp rise in food prices it was also in part a response to the high and rising level of activity.

GROSS NATIONAL PRODUCT CONTINUED  
ITS ADVANCE AT A RATE HIGHER  
THAN IN THE PREVIOUS QUARTER

THE STRENGTH CAME MAINLY FROM  
HIGHER CONSUMER OUTLAYS AND  
FIXED CAPITAL FORMATION

FIXED CAPITAL SHOWED ONE  
OF THE SHARPEST INCREASES

<sup>1</sup> All comparisons except 3 Quarters 1964 to 3 Quarters 1965 are based on data seasonally adjusted at annual rates.

## DEVELOPMENTS IN THE THIRD QUARTER

### Personal Expenditure

Personal expenditure on goods and services reached a level of \$32.1 billion seasonally adjusted at annual rates, an increase of 2½ per cent over the second quarter. Most of this gain represented a real increase in consumption; a less than one half per cent price increase indicated a continuation of the rapid real gains in personal consumption recorded in the second quarter. Commodity prices, on average, showed little advance from the preceding quarter, while the services price index increased by about 1 per cent.

As in the second quarter the annual rate of expenditure on goods accounted for almost three quarters, or \$568 million, of the total increase of \$776 million in consumer spending; in contrast to the preceding quarter, the increase in demand for durables was considerably stronger than for non-durables. Spending on goods increased by 3 per cent and on services by less than 2 per cent; in the goods sector, the demand for durables rose a sharp 8 per cent, against a 2½ per cent increase last quarter, while non-durables were less than 2 per cent above the previous period, when they rose by 3½ per cent.

The strength in consumer spending on durables was widespread as new and used car purchases rose over 11 per cent, accounting for over \$200 million of the additional spending in the quarter, and all other durables showed increases, some rising rather sharply above their performances in the two preceding quarters; home furnishings were up by 4½ per cent, appliances and radios by 7 per cent, and jewellery and watches also by 7 per cent.

Unlike the preceding quarter when a notable increase in purchases of foodstuffs occurred, the third quarter was marked by increased clothing purchases; total clothing was up by over 4 per cent (as against 2 per cent in the previous quarter) and men's clothing in particular gained sharply, by 5½ per cent. Food gained only slightly from its strong second quarter showing, while alcohol, for which demand had been strong in earlier periods, was almost unchanged. Thus the gains in non-durables were unevenly distributed in the third quarter, unlike the widespread strength in the previous quarter.

Nearly all service components increased in the 1 per cent to 2 per cent range. Purchased transport, which had risen sharply in the last quarter, gained about 1 per cent; outlays on shelter were higher by 1½ per cent, while household operations were up by just over 2 per cent, a lesser gain than previously. Expenditures on personal services and personal care each increased by nearly 2 per cent and were noticeably stronger than in the last quarter. In general, increases were widespread and moderate for all service components.

### Business Fixed Capital Formation

Business fixed capital formation, including residential construction, rose 5 per cent from the second to third quarter to reach an annual rate of \$10,776 million after allowance for seasonal factors. The estimated increase of \$540 million came almost entirely from the strength in business demand for plant and equipment, housing being little changed. The increase in capital outlays continued to raise the proportion of production being devoted to fixed capital; at about 21 per cent it is well above the low point of 17 per cent recorded in the current expansion, but still some way below the high of almost 24 per cent which was recorded during the investment boom of 1956-57.

Business outlays on plant and machinery amounted to an annual rate of \$8,616 million, or 6½ per cent above the second quarter. Expenditures on non-residential construction climbed 7½ per cent to \$4,348 million, while those on machinery and equipment rose over 5 per cent to \$4,268 million. The strength in non-residential construction appears to be more dominant in engineering construction than in work on buildings and structures. While no final breakdown of this investment in machinery and equipment is available it is evident that the higher level in the third quarter called forth increases from both domestic and foreign suppliers.

The value of housing put in place climbed by just over one-half per cent to an annual rate of \$2,160 million in the third quarter. Housing starts edged upward from 173,900 to 175,600 at adjusted annual rates, while completions dropped from 168,200 to 142,900 after allowing for seasonal changes. Urban single-detached dwellings increased during the quarter in contrast to a drop in apartment and other multiple dwellings. As noted in earlier reports, the seasonal adjustment of many series connected with housing presents difficult problems due to changing seasonal patterns of house-building activity. Loans under the winter house-building incentive programme were made available from September 15, and an earlier announcement than in previous years of direct lending by Central Mortgage and Housing Corporation in support of this programme, induced a significantly larger number of applications for NHA loans in September than in the same month of last year.

### Investment in Non-farm Business Inventories

Business inventory accumulation continued in the third quarter at an annual rate of \$700 million after allowance is made for seasonal variation. This compares with a rate of accumulation of \$944 million in the first quarter of this year, and \$768 million in the second quarter.

All the major industry groups contributed to the build up of stocks, with retail trade and manufacturing showing the largest gains. Retail trade

contributed a little less than one half of the total stock accumulation and manufacturing more than one third. The following table shows the value of

physical change in non-farm business inventories in the first, second and third quarters of 1965, by industry:

### Change in Non-farm Business Inventories

(Seasonally adjusted at annual rates)

Manufacturers' total stocks increased in the third quarter but at a lower rate than in the previous quarter. As in the second quarter, almost all the stock building took place in the hands of manufacturers of durable goods, primarily due to an accumulation in stocks of primary metal, metal fabricating, machinery, and electrical products producing industries. Inventory movements of non-durable goods exerted a moderating influence on the pace of accumulation of total manufacturers' stocks, as mixed movements within the industrial groups resulted in almost no change in investment in the stocks of the non-durable group. Additions to stocks took place at all stages of production, the highest being in the stocks of raw materials. The stock-to-shipments ratio increased, but without bringing it above the average of the current expansion.

Inventories in wholesale trade increased at a lower rate compared to the previous quarter. While there was a widespread accumulation in the stocks of non-durable goods, durable goods showed a mixed movement which resulted in a very small accumulation.

The build up of stocks in the hands of retailers continued at a higher rate in the third quarter, mainly as a result of the increased rate of accumulation of non-durable goods; however, stock accumulation was widespread in both durable and non-durable goods. A major part of the inventory investment in durable goods resulted from the higher level of stocks of motor vehicles dealers.

The non-durable accumulation may have reflected in part the slower rate of growth of consumer spending on non-durable goods in the third quarter.

### Exports and Imports of Goods and Services

The deficit in the external account at a seasonally adjusted annual rate of \$1,092 million was little changed from the previous quarter. The increase of \$52 million at annual rates resulted mainly from a higher adverse balance on non-merchandise account; the surplus arising from merchandise trade remained almost unchanged as both exports and imports of goods rose 3½ per cent to annual rates of \$8,784 million and \$8,600 million respectively.

After allowance for seasonal factors, sales abroad were higher for wheat, nickel and copper, crude petroleum, asbestos and fertilizers, lumber, and fish and its products, while declines were experienced in aluminum, iron ore and zinc. Data on commodity imports are not yet available.

Overall export gains were made primarily in markets outside the United States and the United Kingdom. However, suppliers in these two countries accounted for most of the increase in Canadian imports.

A larger deficit in the miscellaneous service account (personal remittances, official contributions, business services) was the main element in the change in non-merchandise trade.

<sup>1</sup> Adjustments to Trade of Canada figures for National Accounts purposes increased exports and reduced imports in both the second and third quarters, thereby enlarging the surplus on merchandise trade. Details of adjustments appear in the third quarter estimates of the Canadian Balance of International Payments.

### The Government Sector

At seasonally adjusted annual rates, the surplus on a National Accounts basis of all governments combined declined to a rate of \$224 million in the third quarter from the second quarter rate of \$388 million. The decline can be accounted for by a widening of the provincial-municipal deficit as the increase in expenditures was more than double that in revenues. The surplus at the federal level remained virtually unchanged.

Total revenue of all governments combined rose to a level of \$17,656 million an increase of \$144 million from the previous quarter. Revenues from indirect taxes continued to rise substantially during the quarter. However, total personal direct tax revenues increased marginally as federal receipts declined by about 5 per cent, a consequence of the reduction in federal personal income tax rates which went into effect at the beginning of July. Changes were small and offsetting in the other revenue components.<sup>1</sup>

Expenditures of all governments combined reached a level of \$17,432 million, an increase of \$308 million from the previous quarter and more than double the increase in revenues. The bulk of the increases occurred at the provincial-municipal level and resulted mainly from larger grants to hospitals, educational, and welfare-type institu-

tions. Expenditures on goods and services at this level remained almost unchanged from the second quarter with increased provincial outlays offsetting a decline in spending by municipal governments.

Total outlays of the federal government rose by less than 1 per cent, the result of offsetting movements in expenditures on goods and services and transfers to other levels of government. Increased international aid payments and salaries and wages were factors in the sharp rise in non-defensive outlays on goods and services; the level of defence expenditures was unchanged. Payments to other levels of government declined, in part a reflection of the arrangements for provincial opting-out of certain federal-provincial shared cost programmes.

### Price Movements in Third Quarter

Price increases were evident in most areas in the third quarter, although their overall effect was less pronounced than in the previous quarter. Significant changes appear to have occurred largely in service purchases made by consumers and in certain classes of exports. As noted earlier, higher prices accounted for approximately one quarter of the increase in the value of production, implying a price rise in Gross National Expenditure of between one half and three quarters per cent. The implicit price index for Gross National Expenditure noted above excludes the effect of movements in farm inventories and grain in commercial channels which unduly influenced the overall implicit price index. During the same period the widely used consumer price index which is not adjusted for seasonal movements, rose by close to three quarters of one per cent. It may be noted that in the first two months of the fourth quarter, the movements of the index suggest a sharp rise, particularly for the food component.

<sup>1</sup> The series for corporation direct tax collections by the federal government which is published as supplementary information in the government revenue table, has displayed a marked change in the seasonal pattern in 1964 and 1965 due to the accelerated collection programme introduced in the federal budget in June, 1963. Until the series settles into the newly established quarterly pattern, movements which may eventually emerge as the new pattern have been treated as random movements.

The price component of personal expenditure advanced by under one half per cent, mainly as a result of a one per cent increase in the prices of services. Prices of major durable goods purchased declined fractionally over the period; only slight increases were recorded for non-durable goods, following the rather sharp increase, due particularly to higher food prices, which was experienced in the previous quarter.

Price increases in the construction field appear to have been under one half per cent and were attributable mainly to higher wage rates, the indexes of prices of residential and non-residential building materials showing little change between the second and third quarters.

Export prices on average showed a greater increase than in the previous quarter, largely as a result of higher world prices for certain non-ferrous metals; animal product prices rose sharply.

### Income Flows

Wages, salaries and supplementary labour income rose by over 2½ per cent in the third quarter, a gain similar to those recorded in the previous quarters of the year. The gains were maintained partly as a result of retroactive payments. The rate of advance was higher in the service than in the goods-producing industries.

Total wages and salaries for the service-producing industries increased by 3 per cent with the increases by industry ranging from just over 2 per cent in trade to almost 4 per cent in government service. The higher than usual rises in government service and transportation, communication and other utilities were in part due to retroactive wage payments to federal and provincial employees and to postal workers.

Wage and salary payments in the goods-producing industries rose by 2½ per cent in the quarter. The construction and manufacturing industries recorded gains of 5 and 2 per cent respectively, reflecting in part higher levels of employment. Wages and salaries in the primary industries showed little change.

Corporation profits (before taxes and before dividends paid to non-residents) rose by almost 3 per cent over the previous quarter and seasonally adjusted at annual rates exceeded the \$5 billion mark. Despite considerably higher levels of production, total manufacturing industries profits showed very little change as a result of offsetting movements; within this total, profits were notably higher in the wood and metal industries but declines were recorded by the paper and petroleum and coal industries. The overall increase was mainly attributable to higher profits in the mining, quarrying and oil wells, retail trade and finance industries. The ratio of profits before taxes to total output showed little change from that obtaining in the first half of the year.

Accrued net income of farm operators from farm production increased to a seasonally adjusted annual rate of \$1,712 million in the third quarter, 9½ per cent above the second quarter rate. Higher levels of both grain and livestock production were responsible for the rise. The increase in the value of grain production was due mainly to larger profits of the Canadian Wheat Board, reflecting sharply increased grain exports during the quarter. The increase in the value of livestock production reflected higher receipts from sales as both the number of animals marketed and prices rose substantially.

It may be noted that the estimate of the new crop contained in this publication has been revised downward by \$128 million from that published in the second quarter report. The cool, wet weather in many parts of Canada from mid-August to the end of September, hampered harvesting operations and caused considerable reduction in yields, thus reducing the earlier record harvest prospects.

### Production by Industry

Seasonally adjusted real domestic product less agriculture for the third quarter of 1965 was 1.7 per cent higher than in the preceding quarter, and about 30 per cent above its first quarter 1961 cyclical trough. Most of the strength in the third quarter came from manufacturing, transportation and trade, which together accounted for about three-quarters of the gain. Increases were widespread among the other industry groups as well, with only forestry showing a decline in the quarter.

Manufacturing, with a 2½ per cent increase, was the largest single contributor to the third quarter gain, accounting for over 40 per cent of the increase in non-agricultural real output. Both the durable and the non-durable components of manufacturing increased by 2½ per cent, thus contributing about equally to the third quarter gain.

Within non-durables, the textiles and chemicals groups showed the largest increases, 7 per cent and 4 per cent, respectively. Together these two groups accounted for over one-half of the third quarter increase in non-durable manufacturing output. The next largest contributors were the foods and beverages and the paper products groups.

Within durables, almost all of the increase came from a 4 per cent gain in iron and steel products and a 5 per cent advance in the production of transportation equipment. Motor vehicles and parts production accounted for the entire gain in the latter group, as small gains in the other components were offset by a 3 per cent decline in shipbuilding. In the case of the iron and steel group, most components contributed to the gain. Among the other major groups, increases of 4 and 1 per cent were recorded by non-metallic mineral products and non-ferrous metal products, respectively, while the wood products and the electrical apparatus and supplies groups showed small declines in the third quarter.

The next largest contributions to the gain in total non-agricultural real output came from the transportation, storage and communication group, which advanced by 3 per cent, and from trade, which was up 2 per cent in the third quarter. Jointly these two groups accounted for another one-third of the aggregate gain. Within transportation, increases ranging from 2½ to 7 per cent were recorded by most major components, among them railway transport and shipping. The larger part of the increase in trade came from increased retail sales by motor vehicle dealers, department stores and clothing stores. Movements within wholesale trade were

mixed. Among the wholesale trades recording fairly strong gains were groceries and food specialties and meat and dairy products.

Forestry was the only major industry grouping to show a decline in the third quarter. This decline was attributable largely to a drop in pulpwood production from very high second quarter levels. The remaining industry groupings recorded increases ranging from one-half of one per cent in public administration and defence to 3 per cent in electric power and gas utilities.

## DEVELOPMENTS IN THE FIRST THREE QUARTERS OF 1965

### The Demand Components

Consumer expenditure for the first three quarters of 1965 was over 7 per cent higher than for the corresponding period of 1964, and virtually matched the rate of increase between the years 1963 and 1964; of this increase, 2 per cent was attributable to prices. Goods and services showed no change in the rate of increase for the two periods, but a

breakdown of the goods component showed non-durables increasing more and durables less than between 1963 and 1964.

The following table shows the pattern of increases in consumer purchasing in the first three quarters of this year compared with the same period of 1964 in relation to the changes between 1963 and 1964.

|                                  | Year 1963<br>to<br>year 1964 | 3 quarters 1964<br>to<br>3 quarters 1965 |

| Other .....                      | 11.5                         | 8.2                                      |
| Total all goods .....            | 7.1                          | 6.9                                      |
| Total services .....             | 7.8                          | 7.6                                      |
| Total consumer expenditure ..... | 7.3                          | 7.2                                      |

The sizeable increase in personal spending was exceeded by the increased income flow to consumers with a resulting higher level of personal net saving in 1965.

Business spending on fixed capital including housing, was higher by almost 17½ per cent than the three quarters of 1964, slightly lower than the 19 per cent increase for the full year anticipated in the mid-year survey of investment plans. The main element of strength was the demand for non-residential construction which was 27 per cent higher than the comparable period of last year.

Spending on housing was up 8½ per cent and on machinery and equipment up about 13½ per cent. This distribution differs from the survey where anticipated increases in outlays for housing and machinery were greater and for non-residential construction lower. Although industrial detail is not available the mid-year survey suggests that the main strength is centred in manufacturing and utilities.

The increased pressure for expansion of productive facilities gave rise to very sharp increases in employment in the construction field,

<sup>1</sup> Wheat clearances - 1964 = 780 M; 1965 = 556 M; 1964 to 1965 = - 28.7%.

<sup>2</sup> Before allowance for progress payments and deliveries.

and to wage rate increases in engineering type construction. In line with investment in machinery, domestic industries mainly producing machinery recorded good gains over the year and imports of machinery in the first seven months were appreciably higher than in the comparable 1964 period.

In the first nine months of 1965 business inventory investment increased by \$730 million, compared with a \$501 million increase in the same period of 1964. Inventory investment was maintained at a moderately high rate throughout 1964 and 1965, with the exception of the fourth quarter of last year, when the work stoppage in the automobile industry caused some unusual stock movements. The increase in inventories as a proportion of the total level of stocks appears to be closely linked to increases in the value of production, and no

sharp fluctuations have been experienced in the relationship of stocks to output, which is still at a comparatively low level.

The main strength in the first nine months of 1965 came from the durable goods held by manufacturers and retail traders. Increases in wholesale trade were moderate.

During the first three quarters of 1965 the deficit in the external account on a National Accounts basis widened to \$773 million from \$268 million in the same period of the previous year. This change of \$505 million came from a deterioration of \$459 million in merchandise trade, reinforced to the extent of \$46 million by a larger deficit in non-merchandise trade. The decrease in the export trade balance was the result of rapidly increasing imports associated

with record levels of income and expenditure in the domestic economy and only moderate gains in overall exports of goods. A sharp drop which occurred in shipments of wheat as previous contracts came to completion largely offset sizeable gains in exports of motor vehicles and parts, non-ferrous metallic ores and alloys and wood pulp and newsprint. Details on commodity imports for the first seven months of this year compared with a similar period in 1964 showed larger imports of motor vehicles and parts, machinery, metal and chemical fabricated materials.

Some improvement in the travel account failed to balance further declines in the other service accounts.

### The Government Sector

Comparing the first nine months of 1965 with the corresponding period of the previous year, total revenues of all governments combined exceeded total expenditures, with the result that, on a National Accounts basis, there was a shift from a deficit of \$122 million in 1964 to a surplus of \$67 million in 1965. The bulk of the gain occurred at the federal level where the surplus rose from \$78 million to \$245 million. At the provincial-municipal level, the deficit narrowed slightly from \$200 million in the first three quarters of 1964 to \$178 million in the first three quarters of this year.

Reflecting the continuing high levels of income and employment, total revenues of all governments combined increased over 11 per cent. Receipts from indirect taxes rose sharply and accounted for a large part of the gain. The increase in federal

indirect tax revenues was in part a consequence of the final stage of the imposition of the sales tax on production machinery and building materials. Indirect tax revenues of provincial and municipal governments rose 10 per cent, mainly attributable to larger returns from sales and gasoline taxes and increased real property tax revenue.

Revenues from direct taxes also rose substantially, but the rate of increase at the provincial-municipal level was much higher than at the federal level. The differing rates of increase are in part a reflection of an increased abatement in favour of the provinces of personal income tax from 18 per cent to 21 per cent and of estate taxes from 50 per cent to 75 per cent and of the lower federal personal income tax rates which came into effect as of the first of July, 1965.

Total expenditures of all levels of government combined increased by 9½ per cent, with most of the increase accounted for by advances in expenditures on goods and services and in transfer payments to persons, principally at the provincial-municipal level. Expenditures on goods and services by provincial and municipal governments rose by about 12 per cent mainly owing to increases in salaries and wages and in capital outlays. Expenditure on goods and services by the federal government rose by 7 per cent with most of the increase occurring in non-defence outlays.

There was a rise of just over 9 per cent in transfer payments to persons from all governments combined. The major gain occurred in payments made by the provincial and municipal governments, particularly to hospitals, educational and similar institutions.

<sup>1</sup> Based on data unadjusted for seasonality.

<sup>2</sup> The index for the second-to-third quarter comparison is based on Gross National Expenditure exclusive of farm inventories and grain in commercial channels.

## Price Movements

With the price component of gross national product advancing by close to 3 per cent between the first nine months of 1964 and 1965, somewhat more of an overall price increase is indicated for this year than the close to 2½ per cent change recorded for the preceding year.

With the exception of exports, prices of all final demand categories advanced more in 1965 than in 1964. The price component of consumer expenditures, increasing by 2 per cent, reflected increases of over 3 per cent in service prices, while non-durable goods prices increased by close to 2 per cent and durable goods prices were virtually unchanged. Prices of non-food commodities, increasing by about 1 per cent, showed approximately the same increase between 1964 and 1965 as between 1963 and 1964. Industry selling price indexes for non-food final products of manufacturing also indicate that there has been little price change for these commodities.

The price component of fixed capital reflected increases resulting from a mix of changes in sales tax, material prices and wage rates.

The relative stability in export prices in the nine months comparison reflected offsetting movements in the prices of the food, fuel, beverages and tobacco groups as compared with all other merchandise exports groups. Prices of the food group declined by over 2 per cent in this comparison, largely because of a decrease in wheat export prices, at the beginning of 1965. Prices of all other merchandise exports increased by about 1 per cent.

## Income Flows

Data for the first nine months of 1965 compared with the first nine months of 1964 showed a 10½ per cent increase in labour income. Much the largest increase by industry, about 22 per cent, was in construction, reflecting the great strength in non-residential building and engineering and the substantial expansion in housing. The increase for manufacturing, which is the largest industry in the goods-producing group, was over 9 per cent. Gains of 13 per cent and 10 per cent were recorded in the service and trade industries respectively. However, gains in the remaining goods-producing industries were larger than those in the rest of the service-producing industries, and as a result the overall rise for goods-producing industries (11½ per cent) was slightly higher than that for service-producing industries (10 per cent).

The unusually high level of profits in the fourth quarter 1964 and the increase in the third quarter this year contributed to the gain of 7½ per cent of the first three quarters of 1965 from the same period last year. Although higher profits were general, among the leading industries were mining, quarrying and oil wells, food and beverages, non-metallic mineral products, communication, utilities, wholesale and retail trade, services and other non-manufacturing industries.

Accrued net income of farm operators rose 7½ per cent in the first nine months of the year compared to the same period last year. Much of the increase can be attributed to the value of the 1965 crop, estimated to be 15½ per cent higher than the 1964 value and the third largest on record. Higher levels for the value of livestock production and greater returns from the sales of other farm products, such as dairy products and potatoes, also contributed to the increase. Partly offsetting these rises were increased farm operating expenses and considerably lower Canadian Wheat Board profits which reflected the sharp decline in the level of grain exports from the record level obtained last year.

Net income of non-farm unincorporated business in the first nine months of 1965 was about 6 per cent higher than in the same period of 1964. A rise in the net income in retail trade industry was the largest and contributed more than half to the total increase.

## Production by Industry

Real domestic product less agriculture for the first nine months of 1965 was more than 6 per cent higher than in the corresponding period of 1964. About one-third of this increase was contributed by the 7 per cent gain in manufacturing output. The durable manufacturing component in particular showed a strong gain of 9 per cent, largely as a result of increases of up to 15 per cent in the production of motor vehicles and parts and most of the iron and steel product industries. Increases of 10 and 11 per cent respectively were recorded by electric power and gas utilities and construction, followed by a 9 per cent increase in wholesale trade and a 7½ per cent advance in transportation. Retail trade, mining, non-durable manufacturing, and the communication industry group showed gains ranging from 5 to 7 per cent. Lesser gains were shown by almost all the other industry groups. The post-war average rates of increases were thus exceeded in most major industry groupings.

## LABOUR FORCE (More detail in Table 19)

Total labour force, employment and unemployment were higher in November; the unemployment rate was 3.6 per cent.

|       | total labour force | total employed | employed non-agriculture | unemployed | unemployment rate | not in the labour force |
|-------|--------------------|----------------|--------------------------|------------|-------------------|-------------------------|

## INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production rose slightly in October as gains in manufacturing and electricity and gas utilities were for the most part offset by a 6.1% decline in mining.

## EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 28)

Employment moved higher in October in most selected industries; mining declined marginally.

## INCOME, EARNINGS AND HOURS (More detail in Tables 18, 34 and 35)

Total labour income increased further in October thus continuing its persistent upward trend.

Wages and salaries in manufacturing rose somewhat strongly in October after an interruption the previous month.

Average hourly earnings and weekly hours in manufacturing rose a little in October.

|      |   | wages and salaries in manufacturing |     | average hourly earnings in manufacturing |                   |              | average weekly hours in manufacturing <sup>1</sup> |          |              |

## CONSTRUCTION (More detail in Tables 67, 72 and 73)

Total value of building permits rose appreciably in October with residential and non-residential sectors contributing about equally to the increase.

Housing starts and completions declined in November with the drop in completions being more pronounced; housing under construction picked up after a small decline the previous month.

## SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

Manufacturing shipments, orders and inventories advanced moderately in October.

Rail revenue freight loaded advanced strongly in November.

Cheques cashed in clearing centres fell off in October from the high level of the previous two months.

<sup>1</sup>Gross National Product at market prices excluding accrued net income of farm operators from farm production. <sup>2</sup>Before dividends paid to non-residents; see also footnotes on Table 113. <sup>3</sup>Total of all monthly and quarterly series as in column 14, Table 90.

## PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The index of industrial common stocks gained a further 1% in November.

The consumer price index moved up to 140.2 in November mainly reflecting an increase in food prices.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

<sup>1</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. <sup>2</sup>Includes residual error of estimate. Source at bottom of Table 12.

<sup>1</sup>Quarterly indexes for agriculture and for aggregate domestic product for the current year become available only once a year, with the fourth quarter data.<sup>2</sup>Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, (61-005). For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505)

Table 16: industrial production, volume indexes (1949=100)<sup>1</sup>, based on the unrevised standard industrial classification

<sup>1</sup>Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. <sup>2</sup>The labour force as a percentage of the population 14 years of age and over. <sup>3</sup>The unemployed as a percentage of the labour force. <sup>1</sup>See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. <sup>3</sup>The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>4</sup>Includes miscellaneous manufacturing industries. <sup>5</sup>Includes also publishing and allied industries. <sup>6</sup>Includes also the storage and communication industries.

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. <sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>4</sup>End of period. Annual figures for inventories and unfilled orders are end of December values.

<sup>1</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>2</sup>100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

<sup>1</sup>Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. <sup>4</sup>Excluding shipments for re-processing at maker's own plant. Note: Components may not add to totals due to rounding. <sup>1</sup>Includes crude oil, condensate and pentanes plus. <sup>2</sup>Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. <sup>3</sup>Gross new production by field and processing plants less field flared and waste, Canadian Sources only. <sup>4</sup>By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Sales of Manufactured and Natural Gas (45-005), D. B. S.

Note: Components may not add to totals due to rounding differences. <sup>1</sup>The data are collected for 1,400 municipalities and individual figures are available on request. Some of the annual totals for 1963 and 1964 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Sources: Building Permits (64-001), D. B. S.

<sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D. B. S.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. <sup>2</sup>End of period. Source: New Residential Construction (64-002), D.B.S.

<sup>1</sup>Footnote and Source are at Bottom of Table 71. <sup>2</sup>Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

<sup>1</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. <sup>2</sup>Planks and boards, flooring and square timber. <sup>3</sup>Hollow blocks including fireproofing and load-bearing tile. <sup>4</sup>For building insulation only.

<sup>5</sup>Figures cover the production of firms which normally account for 90 per cent of the total for Canada. <sup>6</sup>Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

<sup>1</sup>These indexes are available for January, April and August only. <sup>2</sup>Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. <sup>3</sup>Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. <sup>4</sup>Barley No. 1 feed; hogs grade "B" alive. <sup>5</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. <sup>6</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. <sup>7</sup>Quotations refer to steers of all weights. <sup>8</sup>Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

<sup>1</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.<sup>2</sup>Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.<sup>3</sup>Annual data are monthly averages of crop year. <sup>4</sup>Includes eggs for hatching. Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.

<sup>1</sup>As at end of period. Last month is preliminary.<sup>2</sup>Milk equivalents of cottage cheese and factory cheese other than cheddar, though not included in the monthly figures, are included in the monthly averages. <sup>3</sup>Includes butter and cheese imported and "in transit". <sup>4</sup>Exclusive of Newfoundland; includes hatching eggs. Sources: Dairy Factory Production (32-002), Dairy Review (23-001), Stocks of Dairy and Poultry Products (32-009), Production of Eggs (23-003), D.B.S.

<sup>1</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. <sup>2</sup>Includes stocks held by manufacturers, wholesalers and other warehouses. <sup>3</sup>Many mills were operating at more than the standard 26 working days in the month. <sup>1</sup>Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. <sup>2</sup>Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

\*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. <sup>1</sup>Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. <sup>2</sup>Companies licensed under the Small Loans Act and affiliated companies engaged in making personal loans. <sup>3</sup>Cash loans with no conditional sales contract but usually repaid in instalments. <sup>4</sup>Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. <sup>5</sup>Loans other than secured loans and mortgage loans.

<sup>6</sup>Figures for dates other than year-end are estimated on the basis of loans made by twelve companies. <sup>7</sup>Sum of instalment credit of clothing hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. <sup>8</sup>Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. <sup>9</sup>Amount owing to oil companies ex commercial accounts. <sup>10</sup>Excludes mortgage loans data available yearly only. <sup>11</sup>The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form.

<sup>1</sup>Monthly averages for 1963 and 1964 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. <sup>3</sup>Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

<sup>1</sup>Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. <sup>2</sup>Includes Class I carrier only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. Revised figures to December 1963 only. <sup>3</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.

<sup>1</sup>Monthly averages for years 1963 and 1964 differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. <sup>3</sup>United States and other foreign carriers. Excludes in transit passengers. <sup>4</sup>Cargo includes air freight and express but excludes mail and excess baggage. <sup>5</sup>Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. <sup>1</sup>The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. <sup>2</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82 per cent of ordinary insurance sales. <sup>1</sup>The Canada totals by months for 1963 and 1964 do not correspond to the sum of the provincial totals as revision applied to the national total are not yet available for the provinces. Neither the monthly figures for 1963 and 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. Sources: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

<sup>1</sup>The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). <sup>2</sup>As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. <sup>3</sup>Includes also the furniture and furnishings industry. <sup>4</sup>Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. <sup>5</sup>Includes tobacco products, leather and miscellaneous manufacturing industries. <sup>6</sup>Includes also storage and communication industries. <sup>7</sup>Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

### A NOTE TO USERS

#### *Modifications in this issue:*

(1) Table 109 now labelled "Life Insurance Sales by Type and Province" has been extended to include total sales of group and wholesale insurance. The value totals for this series are estimates projected from the sales of 34 companies operating in Canada representing 83% of new group contracts.

(2) Table 110 "Benefit Payments of all Insurance Companies" is unchanged apart from the intro-

duction of the series "Total Payments under Life Insurance" and a slight modification in the general presentation.

(3) Table 111 "Payments to Beneficiaries on Life Insurance Death Claims" has been expanded by the addition of the number of policies issued and details on the amount of payments under individual and group insurances.

## RECENT DEVELOPMENTS IN THE WORK OF THE DOMINION BUREAU OF STATISTICS<sup>1</sup>

From time to time these notes have referred to what has been accomplished or is contemplated in the implementation of standard classification systems throughout the range of the Bureau's statistical series. Once again important developments can be reported in this long-range programme of statistical integration. Two important recent developments are the publication of the first report on productivity and the release of preliminary data on the stock of fixed capital. Further developments are imminent in both areas.

The decision to convert from a Decennial to a Quinquennial Census of Merchandising and Service Trades, beginning in 1966, is of major importance to measurement in this large and growing range of activities. Aside from providing more up-to-date information, it improves the results of current samples since it provides a new benchmark and a new sampling frame every five years instead of every ten. A number of other new developments are under way in these trades.

The new administrative arrangements within the framework of the Central Staffs may be of interest to readers, namely the establishment of a Regional Statistics Unit and an Econometric Research Unit. In response to the widespread interest in statistics at the provincial and sub-provincial level, the Bureau has established a Regional Statistics and Analysis Staff. The primary purposes of the Staff are to: (1) strengthen liaison and communications arrangements with the provinces in the area of economic statistics; (2) to co-ordinate and strengthen DBS regional statistical programmes; (3) to carry out special analytical and feasibility studies; and (4) to provide or arrange for consultative services to the provinces as required. Special requirements of federal government departments, and agencies concerned with area development (such as ADA, ARDA, ADB and the Economic Council) will also be met as resources permit. The establishment of an Econometric Research Consultation Staff is intended to enable the Bureau to make more use of the econometric techniques of analysis and estimation which developing computer technology makes feasible. The purpose of the Staff is to provide consultation to subject matter specialists and to carry out technical studies having Bureau-wide application.

### Statistical Integration

The interim edition of the Standard Geographical Classification Manual was released in 1965; the final edition will be released in 1966. This system, which is to be used in many of the Bureau's statistical series, is to be adopted in the Censuses of Manufacturing, Forestry and Mining in 1966 or 1967.

In the course of adopting the Standard Commodity Classification, it became apparent that the system required modification for specific purposes.

Thus an Export Commodity Classification and an Import Commodity Classification (XCC and MCC) were devised for use in external trade statistics. Work on the modifications required for use in industrial statistics have gone forward and the Bureau has circulated to users in and out of government a preliminary draft of a two volume working manual—"Industrial Commodity Classification Manual". It is planned to implement this classification in the 1966 and 1967 censuses of manufactures, mines and forestry. It is also planned to expand the annual commodity statistics now being collected in the Census of Industry to meet the needs of individual users and the Bureau itself.

Considerable progress has been made in implementing standard classification systems in transportation statistics. The American Association of Railroads adopted a system of classifying commodities carried by rail which had been devised by the United States Bureau of the Census and Canadian railways followed suit. DBS has developed a method of converting this coding so that rail freight can be readily classified according to the Standard Commodity Classification. Modified versions of the standard have been introduced into road, shipping and canal statistics. The new system will make it possible to compare commodity shipments by different modes of transport and to convert between series.

The Standard Industrial Classification system has been introduced in statistics of water transport and civil aviation. The organization of the railways is being examined with a view to identifying establishments according to the Standard.

The Census of Manufactures introduced the revised Standard Industrial Classification in 1960 and the new definition of establishment (the smallest unit which is a separate operating entity capable of reporting all elements of basic industrial statistics) in 1961. For the years 1957-61, manufacturing statistics on the unrevised SIC and the old "activity basis" were reworked on the revised SIC and the new "establishment" basis to provide an overlap. For 1961 and subsequent years manufacturing statistics have also been expanded to cover "total activity" of manufacturing establishments in addition to manufacturing activity.

A survey of the primary fishing industry is planned for implementation in 1966. This survey will obtain data on inputs and outputs on an establishment basis, thus bringing this resource-based industry within the ambit of an integrated statistical system.

---

<sup>1</sup> This is the seventh of a series of notes intended to keep readers of the "Canadian Journal of Economics and Political Science" in touch with the evolution of statistical programmes in Canada. The first note was published in November, 1959; subsequent notes were published in February issues of the Journal. This note is reprinted here by kind permission of the Editor. Reprints are available from DBS on request.

Beginning with 1965, the Censuses of Manufacturing, Forestry and Mining will adopt the coding systems developed for the Central List of Establishments. For several years returns will be tabulated in accordance with the codes previously in use for the purpose of providing an overlap between the new and the old codes.

With the recent adoption of the Central List for corporation financial statistics, all major economic series now draw on the same list of reporting units.

Attention is now being turned to developing a Standard Classification of Services. This will supplement the Standard Commodity Classification in providing a vehicle for collecting and assembling data on total expenditure for goods and services, including service inputs and outputs of the different industries.

### Productivity Statistics

The first annual supplement to the reference paper "Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Nonagricultural Industries, 1947-63"<sup>2</sup>, released in April 1965, will be available shortly. Agriculture is now included in the coverage of the indexes, which thus embrace the commercial industries as a whole. The period covered by the indexes is 1946 to 1964 and separate detail has been provided for agriculture, manufacturing and the residual non-manufacturing industries of the commercial nonagricultural sector. In successive annual supplements it may be possible to provide further detail at the industry division level.

Draft productivity studies have been completed for the Synthetic Textile Mills and Breweries Industries, and a third study covering Pulp and Paper Mills is in progress. After final review, it is hoped that these three studies can be published simultaneously early in 1966.

### The Stock of Fixed Capital

In order to shed some light on the increasing stock of capital as a factor in economic growth, the Bureau has been developing estimates of the stock of capital goods. Preliminary results were released in the DBS Daily Bulletin Supplement 2, December 22, 1964. These estimates cover total manufacturing using five different sets of assumptions with respect to the average length of life of fixed capital goods; other tabular material presented in the Bulletin is based on a single set of assumptions. A report "Estimates of Fixed Capital Flows and Stocks—Manufacturing—Canada, 1926-1960" has been circulated for comment and is available on request. Estimates for non-manufacturing industries are also being developed and preliminary data for selected industries were presented in the above-mentioned bulletin. A second report, for selected non-manufac-

turing industries, is being prepared. These reports will contain more detailed tabular material, a review of concepts, sources and methods, as well as a comprehensive appraisal of the data.

### Merchandising and Services Statistics

The collection of statistics in these areas presents special problems because of the multiplicity of units, particularly in the Retail and Service segments, the high rate of "births and deaths" (of stores) and the ease of shifting from one trade to another. The following paragraphs set out what statistics may be expected to emerge as the Bureau's programme is fully implemented in Retail Trade, Wholesale Trade and Service Trades. The programme is described at length in an article in the Canadian Statistical Review, August, 1965, "Some Elements of Newness in a Basic Programme of Statistics—Merchandising and Services Division".

#### Retail Trade

- (1) Beginning with the 1961 Census, two kinds of units are dealt with, the store or location, and the establishment<sup>3</sup>.
- (2) Approximately 35 main commodity lines from large and medium size stores will be dealt with in the Quinquennial Census, to permit classification to trades. Small businesses will be permitted to specify their broad lines. As a post-censal effort, a sample survey of commodity detail of 120 items will be undertaken.
- (3) Retail Store Sales, Inventories and Credit Receivables data for each individual store will be available every five years in full trade detail, and by all the standard census geographical detail.
- (4) Operating expenses are to be surveyed in a three year cycle on a sample basis. The first such survey was undertaken in the food trades in 1963. It is planned to develop these surveys into relatively full-scale surveys, including a trading statement and a supplementary section on employment and additional labour income. These surveys will represent an effort to publish intercensal statistics on an industrial basis, using the establishment as the statistical unit. They will also be used from time to time to obtain principal statistics on an industrial basis.
- (5) Attention is being given to problems of measurement in the newer segments of retail trade. It has been decided to measure the Voluntary Chain Segment annually by a total coverage survey.
- (6) Surveys of Direct Selling<sup>4</sup> will be undertaken cyclically, beginning in 1966.

<sup>3</sup> The store (location) is the pragmatic unit approximating a pure activity, capable of reporting sales, inventories and payrolls and fitting cleanly into stratifications by trade, size groupings, geographical divisions, etc. The establishment is the smallest operating unit capable of reporting the range of census detail, i.e. most importantly, operating expenses.

<sup>4</sup> Sales to households, not going through store channels, i.e. books through book clubs, toilet preparations through door-to-door canvassing, etc.

<sup>2</sup> Catalogue number 14-501—75 cents.

## Wholesale Trade

- (1) Wholesale trade is to be covered by an annual full-coverage survey limited to basic items, such as sales and other revenue, inventory, and salaries and wages paid, using the establishment as the statistical unit. However, sampling must be used for more frequent estimates and to secure detail of operating results and other data. In the quinquennial census year all locations contained in establishments will be identified separately so that fine trade and geographical detail can be tabulated.
- (2) The annual survey for Wholesale Proper was introduced in 1963, and for the remaining segments in 1964.
- (3) Commodity data are not collected at present in the annual survey. Quinquennially, some one hundred broad lines will be specified and inter-censally some form of sampling will be used to produce estimates for about three hundred items or lines.
- (4) Sales and inventories data will be available quinquennially in trade and geographical detail. Annually, geographical detail will be limited to the major economic areas; quarterly, there will be a sample of the universe of establishments.
- (5) Operating results data will be collected inter-censally by sampling, possibly in a three year cycle.
- (6) The importance of segmentation in wholesale trade cannot be over-estimated. There are five main segments: (a) Co-operative Marketing Association and other Dealers in Primary Products, (b) Wholesale Merchants, (c) Agents and Brokers, (d) Manufacturers' Sales Branches, and (e) Petroleum Bulk Tank Plants and Truck Distributors. These five segments are broken down into 31 sub-divisions. The problem is to design samples and to analyse and measure each segment as a separate universe with some measures common to all. As the annual surveys are developed, these problems will be examined.

## Service Trades

- (1) The Service Trades covered in the Census are a selected group, i.e. those industries defined by Section 10 of the Standard Industrial Classification with a number of exceptions which are set out in the article in the Canadian Statistical Review referred to at the beginning of this section.
- (2) Annual total coverage surveys are feasible at present for only eight service trades: Regular Theatres, Outdoor Motion Picture Theatres, Film Exchanges, Motion Picture Production, Dry Cleaners, Power Laundries, Hotels, and Advertising Agencies. While these represent only a small percentage of total trades they account for about 30 per cent of total revenue. In addition, a survey of Funeral Directors has been undertaken once between Census Years. For the remainder of the trades, even sampling is difficult and only one trade, Restaurants, Cocktail Lounges and Taverns, is sampled, bringing inter-censal estimates up to a coverage of about 66 per cent.

- (3) The Quinquennial Census will make available every five years full detail of trades, by fine geographical classifications, for key items of revenue, employment and payroll. On an establishment basis, the detail will be available at the provincial level only.

## Other Economic Statistics

Beginning with January, 1965 the Bureau released the new monthly report "Estimates of Employees by Province and by Industry"<sup>5</sup>. These estimates, based on a combination of the long-standing survey of larger establishments and the new sample survey of smaller establishments (initiated in 1961), cover the eight industry divisions for which employment indexes have long been available. A paper describing the method of arriving at the estimates and giving the monthly data prior to 1965 was published under the same title as above<sup>6</sup>.

In order to improve the estimates of total employment, the sample survey of employment in small establishments mentioned above, is being redesigned and methods of estimation are being reviewed. Sample rotation is to be introduced so as to alleviate the burden of reporting.

Moving toward the objective of more comprehensive coverage of employment, the Bureau initiated in 1965 two new monthly surveys in the area of community service. The first, which is based on a sample of School Boards, covers employment in primary and secondary schools; other educational institutions are to be included later. The second is a complete survey of employment in hospitals.

In 1965 the Bureau initiated three special studies in the area of labour statistics: (1) the geographic mobility of adult males; (2) labour turnover in relation to earnings; (3) labour force participation among married women.

The results of the 1964 survey of consumer assets and liabilities, which was similar in scope to those of 1955 and 1958 except that it was expanded to include (a) the estimated value of real estate owned other than owner-occupied homes (but excluding holiday homes) and the amount of mortgage on each property; and (b) investments in public and private corporations, are expected to become available in the near future. Tentative plans have been made to conduct in the spring of 1966 a survey of the distribution of incomes, covering the year 1965. Unlike previous DBS surveys of income distribution, this survey is expected to include farm as well as non-farm incomes.

<sup>5</sup> Catalogue number 72-008—\$1.00 a year.

<sup>6</sup> Estimates of Employees by Province and Industry, 1961-1964, Catalogue number 72-503, 50 cents.

Two reports of consumer expenditure survey results are nearing publication at the time of writing, under the titles "Farm Family Living Expenditure 1958"<sup>7</sup> and "Urban Family Food Expenditure 1962"<sup>8</sup>. The former is one of a series of occasional publications arising from the 1958 Survey of Farm Expenditures and Income. This report follows the form of presentation used in reports of urban family expenditure. In addition to detailed average expenditures by province and region on commodities and services purchased for farm family living, it contains comparisons with urban family expenditures made in 1959<sup>9</sup> by families living in urban centres of 15,000 and over.

"Urban Family Food Expenditure 1962" presents results from monthly surveys of food expenditure carried out as part of the 1962 programme to obtain expenditures representative of the restricted group of families to which the Consumer Price Index relates. Results from the annual recall survey of the complete family budget for 1962 will also be available shortly.

Early in 1965 an annual recall survey of the complete budget was taken which referred to all families and individuals in eleven urban centres, with the calendar year 1964 as the reference period. This survey was similar in size to the 1959 survey in which 1,960 usable records were obtained from a sample of 3,000 households. Because of the quinquennial census, no survey is planned for 1966. It is expected that the 1967 programme will include experimentation in survey methods as well as data collection for Consumer Price Index needs.

A survey of group pension plans is being undertaken early in 1966. Similar to the 1960 survey, but not identical with it, this survey will obtain data on the number and coverage of the plans and some information on terms and conditions, particularly with reference to vesting, and death, widows and orphans, and disability benefits. It will also obtain information on the amount of pension received by persons retired in the course of 1965 in relation to the salary of the previous year. The purpose of the survey is to give some indication of the situation of group pension plans prior to the inception of the Canada Pension Plan and the Quebec Pension Plan.

Beginning with statistics for 1961, the "General Review of the Manufacturing Industries of Canada"<sup>10</sup> is being published in two parts; the first part presents the principal statistics and the second part has the title "Products Shipped by Canadian Manufacturers"<sup>11</sup>.

<sup>7</sup> Catalogue number 62-523—\$1.00.

<sup>8</sup> Catalogue number 62-524—\$1.00.

<sup>9</sup> "Urban Family Expenditure 1959", Catalogue number 62-521—\$1.00.

<sup>10</sup> Catalogue number 31-201—\$2.00.

<sup>11</sup> Catalogue number 31-211—75 cents.

Publication of the economic use grouping of the series Manufacturing Inventories, Orders, and Shipments, which was discontinued some three years ago because of the pressure of work involved in adopting the new Standard Industrial Classification, is being resumed as of January, 1966.

Turning to foreign controlled enterprises in Canada, the manufacturing establishments of all foreign controlled enterprises having an aggregate investment in Canada of \$1 million or more in 1960 have been identified from the Census of Manufactures and their principal operating statistics for 1961 are being tabulated. These tabulations will make it possible to compare Canadian and foreign controlled enterprises with respect to employment, payrolls, value added by manufacture and other characteristics, in addition to the data on the book value of capital investment normally used for this purpose. They will also help in co-ordinating activity and financial data. It is expected that results of this study will be ready for publication in 1966.

Turning to statistics of agriculture, in 1965 the Bureau initiated three new annual surveys: (1) a survey of vegetable processors to determine the contracted acreage of corn, peas and tomatoes actually harvested and the amount harvested from this area; (2) an August survey of large beekeepers to obtain anticipated yields of honey for the purpose of making an estimate preliminary to the estimate made at the end of the season; (3) a survey of firms engaged in exporting cheddar cheese to obtain data on year-end holdings of cheese in storage in Canada but committed for export, information which will be useful in assessing the domestic supply situation. In addition, two experimental studies were undertaken (1) the first of a two year survey to test the feasibility of obtaining early-season forecasts of average yields of winter wheat in Ontario; (2) the second of a two year survey of crops of sour cherries and peaches in the Niagara district.

A paper, "Distribution of Income in Canadian Agriculture" was prepared by a member of the staff of DBS and a member of the staff of the Economic Branch of the Department of Agriculture for presentation to the 35th Annual Meeting, Canadian Agricultural Economics Society held in Vancouver in June 1965. This paper, mimeographed copies of which are available on request<sup>12</sup>, sets out and analyzes the data on income distribution gathered in the Farm Expenditure and Income Sample Survey of 1958. This survey is the most comprehensive and detailed survey of agriculture ever undertaken in Canada.

The most important recent developments in transportation statistics have been covered in the section headed Statistical Integration. However, it

<sup>12</sup> From the Director, Agriculture Division, Dominion Bureau of Statistics.

should be mentioned that the Bureau initiated a new series "Motor Carrier—Freight—Quarterly"<sup>13</sup>, which presents data on operating revenues, expenses, number of employees, tonnage and operating ratios for-hire inter-city carriers whose annual revenues amount to \$100,000 or more. A revised edition of the "Uniform Classification of Railway Employees"<sup>14</sup> was recently issued.

In the field of energy statistics, one new development is a new 10 year series on coal supply-demand for the period 1954-64. A review of the newly established series in energy commodities was instituted to evaluate these series and further refine the data. As a result, improved data for the liquefied petroleum gases, and imports and exports of gas and oil have been developed. The Bureau is now engaged in a programme of collecting financial data for the energy industries which will make it possible to improve the series for industry outputs, inputs, value added, and capital and repair expenditures. A new series on total energy supply-demand, which will interrelate all the energy forms, is now in preparation. Preliminary data are expected to be available within the next year but the study will not be complete until 1968.

In connection with the work of the Dominion Provincial Tax Structure Committee for the next tax-sharing agreement, the Bureau prepared an historical analysis of government revenues and expenditures for the years 1952 to 1962, covering revenue, expenditure, inter-government payments, and debt of federal, provincial and municipal governments; an explanation of the system of classifying revenue and expenditure; and an explanation of the significant fluctuations in the various items of revenue and expenditure. The Bureau will publish an abridged version of the material prepared for the Committee.

As a member of a federal government inter-departmental committee on the coding of expenditure, the Bureau is exploring the possibility of incorporating into the federal government accounting system an analysis of expenditure by activity, programme and economic object. Coupled with this latter analysis is the use of the standard commodity classification to identify purchases of goods.

The economic-functional cross-classification, combining the functional analysis of expenditure, included in the financial management series, and the economic analysis of expenditure, included in the national accounts series, is being prepared for inclusion in the analysis of provincial government expenditure for the year 1963. Such a table has been published for two years (1961 and 1962) for the federal government. Developmental work on such a table for municipal governments is continuing.

A quarterly statement of financial flows for the federal government has been prepared since October 1964, and a similar statement for the provincial government was produced as of the end of September, 1965. Both these statements are available for limited distribution.

A quarterly survey of revenues and expenditures of schools operated by local authorities has been developed in co-operation with delegates to the 1964 federal-provincial conference on education finance statistics. It is expected that this survey will be introduced with the March quarter of 1966.

A reference paper relating to price indexes for capital expenditures on electric transmission and distribution systems will be released early in 1966. While development of indexes for generating facilities is in progress, the essential uniqueness of structures and equipment creates special problems and their completion is not expected within the next year.

The work of reconciling intercensal activity in housing, as reflected in annual starts and completions, with the stock of housing as measured at the Census dates in 1951 and 1961 is well advanced. The primary purpose of this reconciliation is to improve the estimates of investment in residential construction incorporated in the National Accounts.

During the course of 1965 the Bureau commenced publishing in the Canadian Statistical Review two new seasonally adjusted series: the regional components of the labour force and statistics of consumer credit. Plans are under way to publish three additional seasonally adjusted series: (1) the age-sex components of the labour force; (2) manufacturing inventories, orders and shipments classified according to the new S.I.C.; (3) manufacturing shipments by province. The method of seasonally adjusting the labour force series has been changed; the Bureau now uses a method devised by the United States Bureau of the Census, and known as Computer Method X9.

Turning to external trade statistics, a new report entitled "Exports by Mode of Transport"<sup>15</sup> was published for the first time in 1965. This report relates to the nine-month period April-December 1963, and provides statistics on the types of transportation used to carry Canadian exports to their markets. Statistics are included for each group in the Export Commodity Classification with detail by countries and by provinces or regions of customs clearance. This report supersedes the discontinued report on Exports of Canadian Produce to Overseas Countries Via the United States and Via Canadian Ports which was last published for the calendar year 1961.

<sup>13</sup> Catalogue number 53-005—\$1.00 a year.

<sup>14</sup> Catalogue number 12-518—75 cents.

<sup>15</sup> Catalogue number 65-206—\$2.00.

Two new statistical series on Canadian trade were initiated during 1965. From January 1965 exports have been compiled according to the province in which the goods were first laden for export and it is planned to publish this information annually in approximately the same manner as information on Mode of Transport is now published. This series will automatically provide some information on the movement of exports within Canada from their point of first consignment for export to the point at which they are cleared by customs. From September 1965 imports have been compiled by tariff item as well as by commodity class. It is expected that this information will be published annually either with detail on the countries from which goods entered under each tariff item were imported, or perhaps showing both the commodity classes and the countries for imports under each tariff item.

The secondary classification of exports and imports by stage of fabrication for the period 1946 to the present has now been completed although it has not yet been possible to compile these statistics more often than annually. No further work has yet been possible on the classification of exports and imports by end-use or by industrial origin.

International developments, including the measures taken by the United States to improve her balance of payments, have increased the demand for Canadian balance of payments statistics. Complementing the regular bilateral detail on current account transactions published each quarter, the Bureau, beginning in 1965, started to publish concurrently the distribution of short-term capital movements with the United States and with overseas countries as a group. A similar distribution of long-term capital movements has been published currently since early in 1964.

Additional data now being obtained by the Inspector-General of Banks covers the bilateral distribution of foreign currency assets and liabilities of chartered banks. Publication began in 1965 with the August issue of the Statistical Summary of the Bank of Canada. This information will permit a closer reconciliation of some items in the Canadian balance of payments statistics with corresponding items for other countries. A technical note on the statistical treatment will be found in the balance of payments report for the second quarter of 1965.

With respect to travel, in the course of 1965 the Bureau began to receive monthly information on non-immigrant travellers to Canada arriving by way of the United States. No plans for publication have yet been made. In addition, new arrangements have been introduced for sampling the expenditures of Canadians returning from the United States.

## The Census and Social Statistics

Administrative planning for the 1966 Census of Population and Agriculture is complete. Plans have been made to undertake an analysis of the quality of the Census as follows: (1) checks will be made against other records in order to assess the completeness of the count by provinces and by age groups; (2) persons and households enumerated in the Census will be matched with those enumerated in the Labour Force Survey; (3) a design has been established for a sample survey to re-enumerate farms after the Census of Agriculture so as to bring to light errors in the Census itself.

Monographs based on the 1961 Census data are being prepared on the following subjects: The Labour Force, Merchandising, Internal Migration, Income, Post-War Immigration, Fertility, Agriculture, Education, and Urban Growth. According to present plans, final drafts of these monographs will be completed before the end of 1966. Two chapters of the forthcoming monograph on Income have been published; these chapters deal with the returns to education. In addition, a report was prepared "Economic Status of the Older Population" for the National Conference on the Aging held in Toronto in January, 1966, under the auspices of the Canadian Welfare Council. This report, based on Census data, is not being published but copies are available on request.<sup>16</sup>

The Bureau is publishing for the first time a report dealing exclusively with the qualifications of University teachers. The report "Degrees held by Canadian University Teachers 1963-64, Part I Distribution by Rank, Faculty and Field"<sup>17</sup> was released in September, 1965 and "Part II the Time Lag in Obtaining Advanced Degrees"<sup>18</sup> was in the hands of the printers at time of writing. The second report "Canadian Universities, Income and Expenditure 1962-63"<sup>19</sup> was released in October, 1965.

The first report on in-service training "Organized in Service Training in Four Major Industries 1963"<sup>20</sup> was published and a second survey is under way. A report "Census and Other DBS Data for Vocational Counsellors"<sup>21</sup> was also published.

A report, "Museums and Art Galleries 1964"<sup>22</sup> was released. The previous report on these activities covered the period 1951-52.

A revised edition of the Uniform Crime Reporting manual on the collection of police administration, crime and traffic enforcement statistics took

<sup>16</sup> Central Staffs, Dominion Bureau of Statistics.

<sup>17</sup> Catalogue number 81-527-75 cents.

<sup>18</sup> Catalogue number 81-528-Not yet priced.

<sup>19</sup> Catalogue number 81-212-50 cents.

<sup>20</sup> Catalogue number 81-525-75 cents.

<sup>21</sup> Catalogue number 81-526-\$1.50.

<sup>22</sup> Catalogue number 81-529-Not yet priced.

effect on January 1, 1966. Uniformity of collecting and reporting these data started in 1962 in co-operation with Canadian police forces at all levels: municipal, provincial, federal and railway police. Uniform crime reporting gives a nationwide view of crime and traffic enforcement and other relevant data based on police reports collected under uniform definitions and rules.

#### **The Corporation and Labour Union Returns Act Administration**

The purpose of the Corporation and Labour Union Returns Act, passed by Parliament in April, 1962, is to collect financial and other information on the affairs of corporations and labour unions carrying on activities in Canada. The Administrator

of the Act reports to the Dominion Statistician and in order to eliminate duplicate reporting DBS officers have access to the corporation returns submitted to the Department of National Revenue for Income Tax purposes. Arrangements are being made for the Bureau to assume responsibility for preparing that part of "Taxation Statistics", now published by the Department of National Revenue, which covers corporation statistics. The first report under the Act, "Annual Report of the Minister of Trade and Commerce under the Corporations and Labour Union Returns Act"<sup>23</sup> (for fiscal periods of corporation and labour unions ending in 1962) was published in June 1965.

---

<sup>23</sup> No Catalogue number, obtainable from CALURA Administration, Dominion Bureau of Statistics, Ottawa.

## LABOUR FORCE (More detail in Table 19)

Employment and total labour force rose further in December while unemployment declined. The unemployment rate was 3.4 per cent.

|      |   | total labour force | total employed | employed non-agriculture | unemployed | unemployment rate | not in the labour force |
|------|---|--------------------|----------------|--------------------------|------------|-------------------|-------------------------|
|      |   | thousands          |                |                          |            | per cent          | thousands               |
| 1964 | F | 6,889              | 6,564          | 5,902                    | 325        | 4.7               | 5,844                   |
|      | M | 6,918              | 6,596          | 5,949                    | 322        | 4.7               | 5,838                   |

## INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production advanced by 1.2 per cent in November as all three major components contributed to the increase; mining rose by 5.7 per cent, manufacturing by 0.3 per cent and electric power and gas utilities by 1.5 per cent.

## CONSTRUCTION (More detail in Tables 67, 72 and 73)

Value of building permits decreased noticeably in November in both residential and non-residential sectors. Housing starts and completions picked up in December following the declines registered in the previous three months.

value of building permits

new dwelling construction, centres 5,000 and over

## EXPORTS AND IMPORTS (More details in Tables 91 and 92)

Total exports decreased slightly in November, reflecting declines to the United Kingdom and "all other countries" which were largely offset by an increase to United States.

|        | exports including re-exports (million dollars) |               |                   |                     | imports (million dollars) |                    |                   |                     |
